

“Everything Is Fine”, Says Government, Now Shut Up And Go Back To Sleep!

By Greg Ciola

“Don’t worry America, that radiation drifting over your country from the worst nuclear reactor accident in history is perfectly safe and harmless. Look at Chernobyl, it didn’t affect you. Look at all those nuclear tests the government conducted decades ago, you’re fine. Those X-Rays you get at the dentist and hospital – they don’t harm you. CT scans, why they protect you. Irradiated food, don’t you know it keeps you safe! And those naked body scanners in all the airports, they protect you from terrorists. Microwave ovens, what an invention for quick meals that cause no harm! Oh, and by the way, your cells phones have never caused one case of cancer and aren’t dangerous at all.”

Can you say lies, lies and more lies? This article is not meant for the brainwashed junky that believes everything the government and mainstream media reports. Shortly after the massive Japanese earthquake and tsunami all eyes were glued to the news because of the nuclear reactors malfunctioning. We heard frightening statements like “this is Chernobyl on steroids” that caused great alarm not only in Japan, but throughout the U.S. and other countries due to concern that whatever was happening there was going to get picked up in the jet stream and make its way here. Almost all sources of potassium iodide dried up virtually overnight. Even the U.S. Surgeon General recommended obtaining potassium iodide until the spin meisters went to work and shut her up. How long were/are these reactors going to spew radiation? How much radiation? What amount would/will make it to the U.S.?

Something very interesting happened after mass panic started to grip America. We started a war with Libya and the mass media swept this story under the rug. It didn’t matter that the reactors were still melting down and spewing radiation. As long as the media stopped covering it people believed everything was fine. It didn’t matter that water as far away as Tokyo was declared unsafe or that unsafe levels of radiation was showing up in milk. It didn’t matter that extreme levels of radiation were being detected in the Pacific Ocean. It didn’t matter that the U.S. fleet was ordered to move out of the area. It didn’t matter that a host of food exports from Japan were showing radiation contamination. It didn’t matter that China, South Korea and other Asian countries began blocking Japanese food imports because they were showing unsafe levels of radiation. It didn’t matter that airplanes coming back to the U.S. were setting off radiation scanners. It didn’t matter that meteorologists and other scientific organizations were showing how radiation was being picked up and dispersed around the world and was even in this country.

Shut up and have another beer. Stop taking all those potassium iodide tablets America, you’re fine. In fact, those pills can be dangerous. Go back to your March Madness basketball or whatever pastime anesthetizes you. How can people be so ignorant? As long as it’s not being reported in the news and the government doesn’t make a big deal out of it then we’re all fine. Take a look at a few of the ridiculous lies the majority has been led to believe by our government and the media that can be proven to be 100% false and draw your own conclusions.

Lie #1: Fluoride is safe and it’s good for your teeth

Not only is this statement ridiculous and easily disproven, it's even more of an insult given the fact that most of the fluoride used in municipal water supplies throughout America is actually being imported from China – a Communist country that considers America its enemy. Recent investigative reports caught various municipal water employees that add the chemicals to water on film who were baffled by these barrels of imported Chinese fluoride that contained an unknown solid gunk at the bottom. Is this China's way of getting rid of their industrial waste? They'll just sell it to America and our health departments thinking it's doing our teeth good. It's bad enough that fluoride is a lie and a health risk, but it's even more of an insult that we can't even make it here but have to rely on importing it from China.

Lie #2: Vaccines are safe and effective

This lie will go down in history as one of the biggest crocks in history. Just ask all the vaccine injured parents of autistic children or those debilitated from last year's flu shot or all the soldiers with lifetime disabilities after they took their round of "government mandated" vaccines.

Lie #3: Pesticides are safe to use on our crops and farms.

Let's get this straight – Instead of using natural, God-ordained substances that are 100% safe for human health and actually beneficial to the soil that give us better crops we're told that petroleum based pesticides with other unknown "toxic" additives are the best way to combat pests. This is the same lie propagated by the pharmaceutical industry who thinks we need to go to war against disease with a drug, cut, burn and poison mentality. Just ignore all the sick farmers and all the people suffering with health problems. Don't worry about all the water being contaminated. Don't worry about all the run off making its way into the Mississippi which then dumps into the Gulf of Mexico and destroys beneficial microbial life. Oh, and by the way, pesticides have nothing to do with the exponential increase in cancer.

Lie #4: Mercury in vaccines, dental fillings and light bulbs is safe.

Guess we should dismiss the University of Calgary's study which showed how mercury can destroy the myelin sheath which is the protective coating that surrounds your nerves similar to an electric cord. We should dismiss the BBC's documentary which showed victims of various health problems fully recover after their mercury filling were taken out. We should ignore Dr. Boyd Haley's work on mercury and thimerosal and the crippling effect this has had on vaccinated individuals. Instead, we should trust those in the government that actually had the audacity to come out a few years ago and make the claim that not only wasn't mercury a health risk in vaccines, but that it could actually be beneficial. Go drink another broken mercury thermometer will you!

Lie #5: GMOs are going to feed the world and help farmers have record harvests.

Genetic engineering is just another corporate scam to control farmers and agriculture while adding to the over-burdened toxic environment people are already living in. Just go back to Lie #3. GMOs don't reduce the use of pesticides or herbicides as they were intended to do. They handcuff farmers into binding contracts so they will only grow a specific corporate crop and use a specific corporate pesticide while surrendering the sovereignty of their farms in the process. This would be like building a car that only ran on one company' type of gasoline that you couldn't get anywhere else and had to pay top dollar for when there are gas stations on every corner with cheaper gasoline that works just fine on all other vehicle models. In addition, no safety studies have been conducted to prove that GMOs are safe

for human consumption. Jeffrey Smith, the leading expert in the world blowing the whistle on GMOs has a book titled "Genetic Roulette" where he scientifically documents 65 different health risks with GMO crops, including the risk of cancer and other diseases. Can you say "more StarLink Corn!"

Lie #6: Aspartame is a great sugar substitute that has no known health risks.

Ironically the FDA website actually lists over 92 adverse health effects that have been reported with aspartame. This neurotoxic poison is one of the leading ingredients causing a wide array of health problems in a great majority of the population ignorant enough to ingest this toxic sugar substitute. Just ask all the obese people who drink diet soda containing aspartame like it's going out of style if it has helped them lose weight. You'll find that most diet soda drinkers have actually gained significant weight and struggle with food cravings and sugar addiction. A simple Google search on aspartame dangers is enough to end all arguments. Better yet, just type in "aspartame and cancer" and you'll be astounded.

Lie #7: MSG is a great food additive that doesn't harm your health.

This is another statement with no basis in fact. MSG and aspartame are what are generally referred to in the alternative health community as excitotoxins. They are toxins that have a dangerous and damaging effect on the body's nervous system. MSG actually causes un-natural food cravings. MSG makes awful tasting food taste palatable. MSG also has been shown to interfere with the body's hormonal system. Ever wonder why America's youth is so morbidly obese today? MSG is one of the leading culprits. If you don't care about dying 50 years before your time then go ahead and eat another bag of brand name MSG laden chips along with a pack of beef Jerky and diet soda.

Lie #8: Melamine found in Chinese made milk products is not unsafe.

After this scandal ran the risk of seriously damaging U.S./China relations the U.S. FDA decided to simply raise the melamine threshold and not allow any labs in the U.S. to test melamine levels below that level so they could classify thousands of known products contaminated with melamine in the U.S. and around the world as safe. In case you aren't aware melamine doesn't come out of your body and in the kidney's turns to concrete. Wonder if the escalating kidney issues and kidney failures worldwide have any relation? Oh, and don't pay attention to all those infants in Asia that died or are on permanent dialysis.

Lie #9: The air at ground zero on 911 was safe according to the EPA.

Just ask all the disabled and dead first responders if they believe that. This is just another classic example of the government getting it wrong with no regard for the human casualties and disabilities. The air at ground zero was completely unsafe and every person working at ground zero should have been in full body suits with appropriate breathing devices.

Lie #10: The seafood from the Gulf of Mexico is safe to eat.

You would actually have to be partly lobotomized to believe something as ridiculous as this. Don't pay any attention to all the dead fish washing ashore. Don't connect any dots to all the sick people in the Gulf and the water being unsafe. Don't listen to the reports of the fishermen working on cleanup getting sick. And by all means pay absolutely no attention to the untold amount of Corexit that was dumped and sprayed in the Gulf. In fact, let's send a fishing vessel right out to Deep Water Horizon and get a fresh catch of fish for dinner (if there's any left living) because it is fine, says the EPA. Pay no attention to

the reports that showed massive foliage damage on the leaves of trees throughout the Gulf States and as far north and east as Wisconsin and North Carolina. There's only one logical explanation for this anomaly. The large amounts of Corexit used for cleanup (to hide oil) evaporated and made its way into the upper levels of the atmosphere where it dumped down as acid rain that burned tiny holes in all the vegetation that came in contact with it.

Lie #11: No amount of radiation from the Japanese disaster will affect the health of any American.

Such a trustworthy statement from such trustworthy news sources and trustworthy government officials! If you aren't foolish enough to fall for any of the lies above then you certainly shouldn't trust what is being reported about the Japanese nuclear reactor MELTDOWN. That's exactly what it is and the effects will be damaging for years to come. Taken together with the Gulf oil spill last year and all the Chemtrails being sprayed over our skies every day and it's not hard to see that we are being poisoned deliberately with the intent of thinning the herd. It's what some would call a Perfect Storm!

If you would like to take some preventative steps to neutralize the potential damaging effects of radiation then consider the following products available through Crusador below.

Iodine With Kelp: Available in a 2 OZ. liquid for sublingual use. **Standard Serving Size:** 1 drop (Provides 150 mcg. of iodine as Potassium Iodide & 2 mg kelp).

<http://www.healthtruthrevealed.com/item-16692.html>

Liquid Iodine (angstrom size) & Liquid Potassium: Angstrom sized minerals in a water matrix used sublingually under the tongue are one of the quickest and most effective ways to get Iodine into the body's bloodstream and cells for immediate utilization. These two products are available and the supplier says they have plenty of stock and can make plenty more if needed. For larger orders that need immediate shipment we can drop-ship them directly to you.

Liquid Iodine & Liquid Potassium will boost the thyroid and help remove any radioactive particles. Numerous independent studies show that Potassium and Iodine help protect the body from fallout --- which primarily attacks the thymus gland and endocrine system.

FOR PROTECTION FROM RADIATION MOTHER EARTH MINERALS RECOMMENDS THE FOLLOWING:

6-8 DROPPERS OF IODINE AND POTASSIUM 2X DAILY.

<http://www.healthtruthrevealed.com/item-MEMIO-8.html>

<http://www.healthtruthrevealed.com/item-MEMPO-8.html>

Iodoral: This product is well known and is a great product to have for thyroid issues and radiation exposure. Each tablet provides 12.5 milligrams of potassium iodide. Call first for supply update.

<http://www.healthtruthrevealed.com/item-IOD.html>

Super Sea Veg: This product contains a combination of 12 Ocean plants including 4 species of kelp rich in plant based iodine along with many other protective nutrients. It is available and we don't anticipate any delays.

<http://www.healthtruthrevealed.com/item-SSV.html>

Selenium: Few people know that selenium is of great importance for radiation exposure. Selenium is unequivocally the most protective of all nutrients. Selenium is concentrated in, and an important health factor for those organs related to beginning and maintaining life, such as a man's prostate and a woman's breasts. The U.S. government admits to the importance of this mineral on their National Institutes of Health (NIH) website that prints out to 11 pages. This includes for the thyroid where

selenium may be more important than the mineral iodine that most usually think of when the subject of the thyroid is brought up. Selenium is by far the best anti-cancer nutrient available and should be taken every day by everyone even if there were no radiation threats. **Buyer Beware:** Do not be fooled by inferior selenium supplements. The best selenium on the market is whole food grown selenium manufactured by Innate Response. Each tablet contains 50 mcgs. of whole food grown selenium. 4 tablets a day should be sufficient. Each bottle contains 90 tablets and sells for \$21. We have plenty of stock available and can get plenty more.

Other Products We Sell That May Be Useful

While none of the following products below can protect the thyroid from radiation, they can be effective at helping to keep the body's detoxification pathways open.

Activated Charcoal: This product is by far the best thing available to rid toxic contaminants from the body. It is very effective if you have had exposure to any petroleum based products. In the event of exposure to radiation whether from the air, water, or food, it could help to limit the damage internally if used.

Aquatic Treasure: Can be useful for detoxification, especially within the intestinal system. Contains 89-95% food grade silica.

Milk Thistle: One of the best herbs known to man for detoxifying the liver.

Dandelion: Another powerful herb that is beneficial for liver health.

Liver Detox: Contains a blend of Milk Thistle, Dandelion and other herbs that can protect the liver.
